Garden Soil Replacement

The Certified Compost Leaf Mark Logo is the highest quality standard possible for composted materials as part of the Australian Standards Quality Assurance program.

Enviromix is one of very few accredited producers.

Enviromix Garden Soil Replacement has been professionally formulated to provide the ideal balance of properties required in a good garden top soil, excellent aeration and drainage, high water-holding capacity and water retention, and rich in organic matter. It is ideal for creating new garden beds and lawn base areas, or for general landscaping.

Garden Soil Replacement is a unique blend of fully composted premium recycled garden organics, sand and mineral zeolite that together provide the perfect physical structure of garden soil with high levels of soil organic carbon.

Garden Soil Replacement contains a balanced supply of trace elements and has the ability to suppress certain plant pathogens and diseases.

Garden Soil Replacement provides a stable rich base for any landscape or garden bed that plants love to grow in.

Garden Soil Replacement is perfect for landscaping work, vegetable and flower gardens, perennial and shrub beds

Garden Soil Replacement is guaranteed to be weed-free and disease-free.

Plant Nutrients:-

Nitrogen (N) Maintenance only

Phosphorus (P) Maintenance only

Potassium (K) Maintenance only

Calcium, Magnesium, Sulphur and Trace Elements are present in a balanced form and in quantities adequate for at least nine months under most growing conditions.

pH:- 6.0-7.5 range.

Physical Properties:-

Air-filled porosity: >8%

Organic Carbon >35%

Biological Properties:-

Enviromix products have been found to be suppressive to certain plant pathogens for up to 3 years.

Rates & Use :-

Use Garden Soil Replacement as a garden soil to fill landscape needs spread up to 150 litres/m² or 150mm layer.

Enviromix products are produced from recycled "garden organics" (tree & shrub prunings, grass clippings, fallen leaves and general garden waste) recovered through your community's solid waste stream. Garden organics is one of the single largest components of the waste we currently bury in landfills throughout Australia. Enviromix clean, chip, blend then compost the garden organics to the highest standards available, Compost Australia's Leaf Mark program. This is your mark of a quality naturally pasteurized and composted product that ensures all harmful plant pathogens and viable weed seeds are destroyed. The Enviromix process results in quality garden materials that enhance soil health and have the stability of a slow decomposition rate.

Enviromix helps complete the carbon cycle, returning carbon to the soil in the form of mulches and soil conditioners with the benefit of composted humic materials.

Many other mulches currently available on the market are made up of timber chips, or bark which are either aged or fresh. These materials will use up the majority of fertilisers or food within the soil (which is normally available for the growth of plants) as they begin to decompose.

By supporting our products you will be making a significant contribution towards a major reduction in waste to landfills, returning carbon to soils and greatly assist in improving our urban environment.
