Standard Mulch

The Certified Compost Leaf Mark Logo is the highest quality standard possible for composted materials as part of the Australian Standards Quality Assurance program. Enviromix is one of very few accredited producers.

Standard Mulch provides an effective, attractive and long-term decorative landscape covering. It allows excellent water penetration through the mulch into the soil and encourages ideal conditions for the introduction and population of beneficial organisms within the soil.

Standard Mulch applied in a 100mm layer will reduce water loss from evaporation, increasing the efficiency of water applied.

It assists keeping roots and soils cooler, protecting them from heat and sunlight.

Standard Mulch will also inhibit the establishment of weeds and suppress existing weeds. As a fully composted product it will break down slowly, last longer and not use valuable soil nutrients to break down.

Standard Mulch products are all completely organic and naturally processed to ensure all harmful plant pathogens and viable weed seeds are destroyed.

Standard Mulch is guaranteed to be disease-free and weed-free. Many of the mulches currently available on the market are not pre-treated before use and may contain plant diseases and/or weed seeds which may spread and/or multiply through an area when the material is applied;

Standard Mulch is screened to ensure that the really fine particles are removed so that water can penetrate the mulch and reach the soil.

Standard Mulch suits the mulching of large garden beds or road batters.

Physical Properties:-

Particles >20mm 70%

Biological Properties:-

Standard Mulch products have been found to be suppressive to certain plant pathogens for up to 3 years.

Rates:-

Use Enviromix Standard Mulch for general mulching at rates up to 100 Litres/m² or 100mm layer

Enviromix products are produced from recycled "garden organics" (tree & shrub prunings, grass clippings, fallen leaves and general garden waste) recovered through your community's solid waste stream. Garden organics is one of the single largest components of the waste we currently bury in landfills throughout Australia. Enviromix clean, chip, blend then compost the garden organics to the highest standards available, Compost Australia's Leaf Mark program. This is your mark of a quality naturally pasteurized and composted product that ensures all harmful plant pathogens and viable weed seeds are destroyed. The Enviromix process results in quality garden materials that enhance soil health and have the stability of a slow decomposition rate.

Enviromix helps complete the carbon cycle, returning carbon to the soil in the form of mulches and soil conditioners with the benefit of composted humic materials.

Many other mulches currently available on the market are made up of timber chips, or bark which are either aged or fresh. These materials will use up the majority of fertilisers or food within the soil (which is normally available for the growth of plants) as they begin to decompose.

By supporting our products you will be making a significant contribution towards a major reduction in waste to landfills, returning carbon to soils and greatly assist in improving our urban environment.
